

ACVATIX™

Modulating control valve MXG462S.. with magnetic actuator, PN16

stainless steel

- Short positioning time (< 2 s), high-resolution stroke (1 : 1000)
- Selectable valve characteristic: equal-percentage or linear
- High rangeability
- Operating voltage AC / DC 24 V
- Selectable standard signal inputs DC 0/2...10 V or DC 0/4...20 mA
- DC 0...20 V Phs phase-cut signal input for Staefa controllers
- Indication of operating state, visible from the outside
- Wear-free inductive stroke measurement
- Low friction, robust and maintenance-free
- Spring return facility: A → AB closed when de-energized
- Positioning control, position feedback and manual control
- Parts in contact with medium in CrNi steel
- MXG462S50-30 applications with demineralized water upon request

Use

The control valves MXG462S.. are mixing or through-port valves. They are supplied with the magnetic actuator ready fitted, equipped with an electronics module for position control and position feedback.

The short positioning time, high resolution and high rangeability make these valves ideal for modulating control of open and closed circuits with the highest control requirements.

Type summary

Type reference	DN	Connection [inch]	k_{vs} [m ³ /h]	Δp_{max} [kPa]	Δp_s [kPa]	Operating voltage	Positioning signal	time	Spring return function
MXG462S50-30	50	G 2 3/4 B	30	600	600	AC 24 V DC 20...30 V	DC 0/2...10 V or DC 0/4...20 mA	< 2 s	✓

DN = Nominal size

k_{vs} = Nominal flow rate of cold water (5 to 30 °C) through the fully opened valve (H_{100}) at a differential pressure of 100 kPa (1 bar)

Δp_{max} = Maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve (mixing: path A-AB, B-AB)

Δp_s = Maximum permissible differential pressure at which the motorized valve will close securely against the pressure (close off pressure)

Accessories

Type reference	Description
Z366	Stem heating element for media temperatures < 0 °C, AC / DC 24 V, 10 W

Ordering

Valve body and magnetic actuator form one assembly and cannot be separated.

When placing an order, please specify the quantity, product description and type code.

Example:

Type reference	Stock number	Description	Quantity
MXG462S50-30	MXG462S50-30	Modulating control valve with magnetic actuator	2
Z366	Z366	Stem heating element	2

Delivery

A CrNi-steel seal disc is part of the delivery.

Union fittings and gaskets must be supplied by the installer.

The Z366 stem heating is delivered in a separate package.

Rev. no.

Overview table, see page 13.

Replacement
electronics module
ASE12

Should the valve electronics prove faulty, the electronics module must be replaced by the ASE12 replacement electronics module. Mounting instruction no. 74 319 0404 0 is included.

Technical and mechanical design

For a detailed description of operation, refer to data sheet CA1N4028E.

Control operation

The electronics module converts the positioning signal to a phase-cut power signal which generates a magnetic field in the coil. This causes the armature to change its position in accordance with the interacting forces (magnetic field, counter spring, hydraulics). The armature responds rapidly to any change in signal, transferring the corresponding movement directly to the valve plug, enabling fast changes in load to be corrected quickly and accurately.

The valve's position is measured continuously (inductive). The internal positioning controller balances any disturbance in the system rapidly and delivers the position feedback signal. The valve stroke is proportional to the positioning signal.

Control

The magnetic actuator can be driven by a Siemens controller or a controller of other manufacture that deliver a Dc 0...10 V, DC 2...10 V, DC 0...20 mA or DC 4...20 mA output signal.

To achieve optimum control performance, it is recommended to use a 4-wire connection. In case of DC power supply, a 4-wire connection is **mandatory**!

Spring return facility

If the positioning signal is interrupted, or in the event of a power failure, the valve's return spring will automatically close control path A → AB

Manual control

MANUAL

By pressing (a) and turning (b) the hand wheel in:

- clockwise (CW) direction, control path A → AB can be mechanically opened to between 80...90 %.

OFF

By pressing (a) and turning (b) the hand wheel in:

- counterclockwise (CCW) direction, the actuator will be switched off and the valve closed.

As soon as the hand wheel is pressed and turned, neither the forced control signal Z nor the input signal Y or the phase-cut signal acts on the actuator. The green LED will flash.

AUTO

For automatic control, the hand wheel must be set to the Auto position. The green LED will be lit.

Operator controls and indicators in the electronics housing

1 LED for indication of operating stat

2 Opening for auto calibration

3 DIL switch for mode control

4 Connection terminals

Configuration

DIL switches

Switch	Function	ON / OFF	Description
	Positioning signal Y	ON	[mA]
		OFF	[V] ¹⁾
	Positioning range Y and U	ON	2...10 V, 4...20 mA
		OFF	0...10 V , 0...20 mA ¹⁾
	Valve characteristic	ON	V _{lin} (linear) ¹⁾
		OFF	V _{log} (equal-percentage)

¹⁾ Factory settings

**Selection positioning
signal and range Y**
Voltage and current

 Y	 ON OFF	 ON OFF
 ON OFF	0...10 V	2...10 V
 ON OFF	0...20 mA	4...20 mA

4461Z22

**Selection positioning
range Y and U:**
0...10 V / 0...20 mA or
2...10 V / 4...20 mA

 U	 ON OFF	 ON OFF
Ri > 500 Ω	0...10 V	2...10 V
Ri < 500 Ω	0...20 mA	4...20 mA

4461Z23

Output signal U (position feedback signal) is dependent on the load resistance Ri.
 Ri > 500 Ω, → voltage signal
 Ri < 500 Ω, → current signal

**Selection valve
characteristics**
Equal-percentage or
linear

4461Z24

Forced control input Z

		Z - function		
		no function	fully open	closed
Connections	Transfer			
				
Function	• Z is not connected • The valve will follow the Y-signal or phase-cut signal	• Z connected to G • The valve will fully open via control path A → AB	• Z connected to G0 • The valve will close via control path A → AB	

4461Z13

4461Z13

Signal priority

1. Hand wheel position Man (open) or Off
2. Forced control signal Z
3. Phase-cut signal
4. Signal input Y

Calibration

If the electronics module is replaced or the actuator turned through 180 °, the valve's electronics must be recalibrated. For that, the hand wheel must be set to Auto.

The printed circuit board has a slot (position 3, preceding page).

Calibration is made by bridging the contacts located behind the slot using a screwdriver. The valve will then travel across the full stroke to store the end positions.

While calibration is in progress, the green LED will flash for about 10 seconds (also refer to «Indication of operating state»).

Indication of operating state

LED	Indication	Function	Remarks, troubleshooting
Green	Lit	Control mode	Normal operation; everything o.k.
	Flashing	Calibration In manual control	Wait until calibration is finished (green or red LED will be lit) Hand wheel in Man or Off position
Red	Lit	Calibration error Internal error	Recalibrate (bridge contacts behind the calibration slot) Replace electronics module
	Flashing	Mains fault DC Supply - / +	Check mains network (outside the frequency or voltage range) DC supply + / - connection rectify
Both	Dark	No power supply Electronics faulty	Check mains network, check wiring Replace electronics module

Sizing

Flow chart

Δp_{v100} = differential pressure across the fully open valve and the valve's control path by a volumetric flow $\dot{V}_{100}$

$\dot{V}_{100}$ = volumetric flow with valve fully open (H_{100})

Δp_{max} = maximum permissible differential pressure across the valve's control path, valid for the entire actuating range of the motorized valve (mixing: path A-AB, B-AB)

100 kPa = 1 bar $\approx$ 10 mWC

1 m³/h = 0.278 l/s water at 20 °C

Valve characteristic

Equal percentage

Volumetric flow

Linear

Volumetric flow

Connection type ¹⁾

The 4-wire connection should always be given preference!

4-wire connection

Type reference	S_{NA} [VA]	P_{MED} [W]	S_{TR} [VA]	I_F [A]	wire cross-section [mm ²] max. cable length L [m]		
MXG462S..	65	22	100	6.3	1,5	2,5	4,0

S_{NA} = nominal apparent power for selecting the transformer

P_{med} = typical power consumption

S_{TR} = Minimal require transformer power

I_N = required slow fuse

L = max. cable length; with 4-wire connections, the max. permissible length of the separate 1.5 mm² copper positioning signal wire is 200 m

¹⁾ All information at AC 24 V

Engineering notes

Attention

Conduct the electric connections in accordance with local regulations on electric installations as well as the internal or connection diagrams.

Safety regulations and restrictions designed to ensure the safety of people and property must be observed at all times!

In open circuits, there is a risk of valve disc seizing caused by scale deposits. Additionally, periodic actuation (twice or three times per week) must be planned.

With closed and open circuits always use a strainer upstream of the valve to increase the valve's functional safety.

Mounting notes

Caution

The valve is supplied complete with Mounting Instruction no. 74 319 0378 0.

Orientation

The valve may only be used as a mixing or through port valve, not as a diverting valve. Observe the direction of flow A → AB!

Degree of protection valid only when M20 cable gland supplied by the installer.

When used as a through port valve

Only three-way MXG462S.. valves are supplied. They may be used as straight-through valves by closing off port «B».

Threaded valves
MXG462S.. as through-
port valves

Close off port B with a union fitting.

A Cr-Ni-Stahl seal disc with 3 gaskets is part of the delivery.

Union fittings conforming to ISO 49 / DIN 2950 must be supplied by the installer.

Installation notes

- The MXG462S.. valves are flat-faced allowing sealing with the gaskets provided.
- Do not use hemp for sealing the valve body threads.
- The actuator may not be lagged.

- For electrical installation, refer to «Connection diagrams», page 10.

Maintenance notes

The valves are maintenance-free.

The low friction and robust design make regular servicing unnecessary and ensure a long service life. The valve stem is sealed from external influences by a maintenance-free gland.

If the red LED is lit, the electronics must be recalibrated or replaced.

Repair

Should the valve electronics prove faulty, the electronics module must be replaced by the ASE12 replacement electronics module (refer to Mounting Instruction no 74 319 0404 0).

Caution 

Always disconnect power before fitting or removing the electronics module.

After replacing the electronics module, calibration must be triggered in order to optimally match the electronics to the valve (refer to «Calibration », page 5)

Disposal

The valve is considered an electronics device for disposal in terms of European Directive 2012/19/EU and may not be disposed of as domestic garbage.

- Dispose of the device through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Warranty

Application-specific technical data must be observed.

If specified limits are not observed, Siemens Switzerland Ltd / HVAC Products will not assume any responsibility.

¹⁾ Tested at 1.5 x PN (24 bar), similar to DIN 3230-3.

²⁾ Can be selected via DIL switch.

³⁾ Medium temperatures < 0 °C, the Z366 stem heating element is required.

⁴⁾ The documents can be downloaded from <http://siemens.com/bt/download>.

⁵⁾ In case of strong vibrations, use high-flex stranded wires for safety reasons.

⁶⁾ Valves where PS x DN < 1000, do not require special testing and cannot carry the CE label.

⁷⁾ The application with demineralized water may result in premature valve wear. Please contact your local Siemens office to determine the optimum use for the valve.
